

Science

I have found you the most amazing website where you can research from

<https://spaceplace.nasa.gov/menu/solar-system/> this is designed for children

and is full of facts.

This week your learning objective is to: LO; describe the Sun, Earth and Moon as approximately spherical bodies

You can present your work in any way you choose... it could be a book, leaflet, power point- you choose.

For this week's learning you will need to research how we know that the earth is spherical . Here are some links to help you... First watch this clip

<https://www.bbc.co.uk/bitesize/clips/zd3fb9g> then have a read of the Science

attachment. This links maths and theories to how they discovered Earth was spherical- It is a very interesting read.

There is also some information on <https://www.discoveryeducation.co.uk/>
