

Summer Week 3

Science

This week we are changing our science and we are looking at 'Living things and their habitats.... This topic will cover the next four science lessons.

Learning objective: to describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird.

What we are suggesting is that you look at one of the categories per week: ie amphibians and then at the end of the four weeks / sessions compare the differences.

Amphibians

You can again represent your research in any form you would like - in class we would have made a book. REMEMBER to annotate your drawings!

You will find some information that I have found on amphibians attached which has some comprehension questions to answer.

This website provides lots of information about frogs (amphibians)

<https://www.topmarks.co.uk/Spring/FrogLifeCycle.aspx?age=ks2>

If you watch the video on Discovery that too will give you lots of information- link below

https://central.espresso.co.uk/espresso/primary_uk/subject/module/video/item665349/grade2/module648876/index.html

Discovery: **Username** student16519 **password** student

It would be good if you keep a note of the facts that you have found out that have amazed you or that you have found particularly interesting!
