

Summer Week 5

Lesson 3 Insects

Science

Learning objective: to describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird.

Insects

What we are suggesting is that you look at one of the categories per week: ie amphibians and then at the end of the four weeks / sessions compare the differences.

You can again represent your research in any form you would like - in class we would have made a book. REMEMBER to annotate your drawings!

Watch the video on Discovery it will provide you with lots of information- link below. This video is really interesting, have a go at the activity that goes with it.
